Office Action Summary

Art Unit: 3744

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 6, 7, 14, 16, 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Schanin.

Schanin discloses a control scheme for a cooling device 13 in which the internal temperature set point of 13 is raised by a human status presence detector oc when there is no sensed presence.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 5 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schanin, as applied above, and further in view of Carrell et al or Cross. Both secondary references teach using distant motion sensors to control cooling systems.

Art Unit: 3744

Providing Schanin with such occupancy sensors would have been obvious in order to provide a more specific disclosure in Schanin's system.

Claims 19-24, 27 are withdrawn from further prosecution as not being directed to the elected species of a cooling device. All of these claims are directed to a heating device.

Claims 2, 4, 8-13, 17, 25, 26, 28, 29 withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 8.

The applicant argues that the species are related and that it would not be a serious burden. All species situations involve related inventions by definition and there is a serious burden because of the numerous details recited in the non-elected claims.

The restriction requirement is therefore made final.

The proposed addition of FIG. 5 has been approved and will be made in the due course.
